Rescue Techs

For all your rescue needs:

- **Training**
- **Consulting**
- **Equipment**
- **Rescue standbys**

We are the:

“confined space specialists”

Low slope rescue training

BCAS paramedics

BCAS paramedics Well Trained by **Canada Rescue Techs**

A group of eight British Columbia ambulance service paramedics took part in a one day classroom and field training session to familiarize them with low slope rescue procedures. Participants were provided with a pre-read training manual and rope/webbing shorts to practice their knot tying skills prior to

attending the instructor led training day. The paramedics learned some of the vitals skills required to rescue victims that may be in the unfortunate position of being in a terrain that is too steep for typical stretcher application.

Although BCAS does not provide these type of rescue service nor carry the equipment required, this training provided the paramedics with a solid understanding of rescue capabilities that are available through fire department and search and rescue services.

BCAS paramedics are required to submit “continuing education” (CE) credits on an annual basis to fulfill their licensing obligation to EMA licensing board. This course instructed by a BCAS paramedic, gave the attendees 16 credits towards their annual requirements after completing the pre-read material and hands on training session.

Canada Rescue Techs training services

From the forepeak of a destroyer to the IDLH environment of a sulphur dioxide storage tank, Our training techs have the experience to provide top quality training for any industrial worksite.

We also offer courses in high angle and low slope rescue as

well as emergency vehicle driving courses for municipal fire depts.

All of our courses are custom designed after consultation to meet the specific requirements of each of our clients.
