## Rescue Techs

For all your rescue needs:

- **Training**
- **Consulting**
- **Equipment**
- **Rescue standbys**

We are the:

*“confined space specialists”*

Low Slope rescue training

North Cedar Fire Department

### Low Slope Rescue Team Well Trained by **Canada Rescue Techs**

With years of service in municipal fire departments responsible for wilderness rescues, the team from **Canada Rescue Techs** were able to provide the right equipment and training when the district of North Cedar was looking for their firefighters to become proficient in low slope rescue. Cedar is a picturesque rural community with several wilderness recreational areas that would present the need for a rescue service capable of providing low slope rescue.

During the 2 and a half day course the 12 member rescue team were taught all the requirements to perform low slope rescue techniques following NFPA standards. From basic knot tying to pa-

tient packaging and using mechanical advantage systems. The team learned in a methodical step by step system that puts several learning components together also including a high angle technique for situations that may

require it.

Using the facilities of the department and wilderness areas within the district helped in keeping costs in line for the department while providing quality training with instructors familiar with local concerns.

Great thanks to our volunteers who spend their own time keeping our communities a safer place to live!

### **Canada Rescue Techs** training services

From the forepeak of a destroyer to the IDLH environment of a sulphur dioxide storage tank, Our training techs have the experience to provide top quality training for any industrial worksite.

We also offer courses in high angle and low slope rescue as

well as emergency vehicle driving courses for municipal fire depts.

All of our courses are custom designed after consultation to meet the specific requirements of each of our clients.
