Rescue Techs

For all your rescue needs:

- **Training**
- **Consulting**
- **Equipment**
- **Rescue standbys**

We are the:

"confined space specialists"

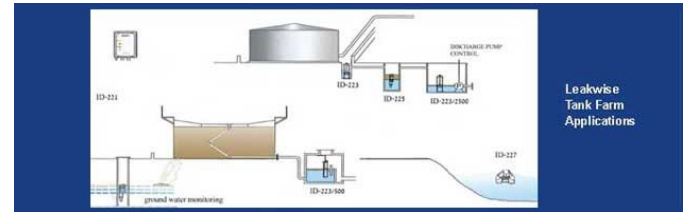

Confined Space rescue standby

Fuel storage tank farm

High hazard workers protected by **Canada Rescue Techs**

When the floating roof of a fuel storage tank collapsed leaving the tank inoperable it left this tank farm facility in Nanaimo B.C. with a significant repair. Several entries into this vessel were made over a two week period to effect repairs.

Hydro carbon storage vessels of this nature can pose a significant risk due to oxygen deficiency or presence of toxic gases such as hydrogen sulphide or explosive fumes.

All necessary precautions such as ventilation, lockout/tag out, spading lines, gas testing were taken prior to entry being authorized.

Canada Rescue Techs personnel were on standby at the entry portal of this high hazard entry,

performing the requirements of gas testing, hatch watch attendant and rescue team.

Multiple workers entered this confined space at one time making an external rescue impractical. **Canada Rescue Techs** created a rescue preplan to include an internal rescue of incapacitated worker.

Canada Rescue Techs rescue standby services

For times when it is not economically feasible to train and equip your own confined space entry rescue team, **Canada Rescue Techs** has a fully equipped mobile command trailer for rescue standby. For IDLH or non-IDLH entries you can rest assured that the

appropriate man power with equipment, training and experience. **Canada Rescue Techs** has proven to be cost effective for industry as we can provide hatch watch, gas testing and rescue services all in one convenient package. With decades of experience in a

variety of emergency response services, we will keep your workers safe and your company work safe compliant.
